Abstract:
Source: JP11032037A2 PROBLEM TO BE SOLVED: To
pre-pay access qualification to purchase or rent without
imposing any surplus load on a certification data
generating device side. SOLUTION: A pre-paid purchase
ticket T_2 is stored in an access ticket storing part 13.

Next, (T_1', n_2) is inputted to a certification data-
imputting part 14. A use condition judging part 15
extracts a corresponding access ticket (t_2, L_2, n_2),
checks whether or not a use condition L_2 is fulfilled, and
reduces frequency information V, when the use
condition is fulfilled. A certification data generating and
outputting part 16 calculates certification data R by
using auxiliary certification decision $(t)_2$ and the use
condition L_2 extracted by the use condition decision part
15 and (du) read from a user specific information
storing part 11, and outputs T_1. A user performs access
to a program in a purchase state or a rent state by
using the T_1.
